

# Resources

## ... from ASE and beyond!

Multiple different sites all hosting fabulous educational resources – but, as an ASE member, did you know about them all? Did you know that that are many resources, from ASE and its partners and very often free, for you as part of your membership?

*Ditch the Dirt* is an exciting new STEM challenge from Practical Action, for pupils aged 8-14 years. This challenge enables pupils to investigate ways of making dirty water cleaner through sieving and filtering, and can also be used to explore ways of making water safe to drink.

### SCRUB UP ON SCIENCE CHALLENGE 2018

Do you think your students have got the skills, scientific knowledge and enthusiasm to create a great bath bomb or bubble bath mixture?

Find out more about this exciting competition from the Society of Cosmetic Scientists (SCS) at [www.scrubupscience.co.uk/competition](http://www.scrubupscience.co.uk/competition)

The new, up-to-date and mobile-friendly ASE website, due to be launched this month, brings them all together in one place – the Resources tab on [www.ase.org.uk](http://www.ase.org.uk)

ASE works with MANY partners – organisations contribute a wealth of knowledge and expertise through advice, guidance and support, often culminating in journal articles and teaching resources. Did you know that there are over 900 such resources on schoolsience (now to be found under the Resources tab)? This number will continually increase as we add to the website on a monthly basis.

In each issue of EiS, we will continue to highlight a few at a time, linking them to pertinent curriculum changes and highlights in the science educational world – the very latest are listed below.

We have listened to your comments and one very important feature of this new website is the new navigation, which now includes national (including all four UK nations) updated curriculum categorisation for ease of use.

Competitions and Events sections will also feature, so check them out for prizes to be won and for CPD opportunities.

We look forward to your comments!

The Field Studies Council (FSC) has launched its 2018 marine science camps. These offer a fantastic opportunity to discover a new place, meet people with a similar interest and consider future study or career options.

Do you recognise these science pioneers? *Brilliant Women* now available in the ASE bookshop from £11.50
