

Contents

- 4 Introduction to the Centre for Industry Education Collaboration (CIEC) special issue of *Primary Science*
Joy Parvin
- 6 Why 'Children Challenging Industry' is so important
Kate Sutton shares her school's recent experiences of participating virtually in Children Challenging Industry (CCI)
- 9 Medicines from microbes
Lucy Butler, Maria O'Hanlon and Dominic Gilchrist examine how the scientists of tomorrow are developing medicines of today
- 13 Site-seeing to inspire primary children
Mackayla Millar explores the benefits of industry site visits to enrich the primary curriculum
- 16 Not another questionnaire! Why is it important to measure the impact of educational programmes?
Agata A. Lambrechts explains how and why CIEC research and evaluations enhance the evidence base about good practice in science teaching and learning, and effective links with industry
- 19 A whole school approach to developing Science Capital
Clare Docking suggests ways to develop Science Capital throughout your school
- 22 Sustainable stories and solutions for our planet
Nicky Waller describes how primary children can learn how to help to look after our planet and explores how industry is playing its part in the bigger picture of sustainability
- 26 What is BEST for primary science?
Nicky Waller explains the BEST approach to teaching and assessing science, with details of how this is being piloted successfully in primary schools
- 30 Take your science teaching to the next level: STEM volunteers in the classroom
Jane Winter describes the impact that STEM professionals could have in the primary classroom, and shares some tips for how to get started
- 34 The Centre for Industry Education Collaboration – A global view
In 2018-19, **Dr. Guirong Wang**, from Beijing University of Chemical Technology, spent a year with CIEC. This article explores the innovative work of CIEC from her viewpoint
- 36 Resource reviews
- 39 About the ASE

CIEC Special Issue

This special issue of *Primary Science*, celebrating the anniversary of CIEC, highlights the importance of working

across the boundaries between education and industry. I have worked closely with one of the largest chemical companies in the world developing their educational outreach, and one of the aspects that has proved most important is unpicking the two different cultures and 'languages' between the different environments. This issue offers a number of articles that demonstrate how CIEC do this, and the benefits of this for teachers and pupils. There are many opportunities to support your teaching through getting involved with outside businesses and industries, and bodies such as CIEC enable this to happen.

A key element of working with industry is the potential to offer 'real' examples of people working in the science field who are not the stereotypical 'scientist'. This gives you a real opportunity to allow your learners to see diversity in the sciences, to realise the variety of science roles that are out there, and to apply science to their lives in a meaningful way.

It has been a pleasure to support this special issue and the wide range of articles within it.
